

Press Release #7

**From Mindy Pechenuk,
Republican candidate, California State Assembly, Dist # 18**

August 14, 2022

Newsom's \$8 billion Water Plan is Just Another Ass-Covering Policy

If You go with Newsom's plan, you will not only not have water, you will not have food.

Mindy Pechenuk

What we need today is an aggressive plan to build 30 desalination plants right now in California.

This is what the California State Assembly needs to put into action right now. Weeks ago I called on Newsom to fire those whom he appointed to the California Coastal Commission who voted against building the new Poseidon desalination plant in Huntington Beach, which would have provide enough water for 400,000 people. Newsom has not fired those Coastal Commissioners yet!

What would 30 desalination plants do:

1) This would give California the water needed, eliminating having to decide between water to drink or grow our food. Newsom's \$8 billion plan will leave you with no food in the grocery store and nothing

on your plate to eat and hardly a drop of water to drink.

There is no reason for California to have more than 800,000 acres of some of the best farmland in the world lying fallow this year.

2) The building of 30 desalination plants in 1 year, with teams of builders working 24/7 would create a tremendous industrial mobilization in California. and the rest of the country. Think of the bill of materials for building 30 desalination plants. All types of machine tools, construction, and all the nuts and bolts of engineering that will go into high gear. Our citizens will be working in productive projects, with a moral mission. We will be training our youth and others in and for this mission.

3) Newsom's plan is the Green Agenda of the Uni Party Globalists of Wall Street, City of London and the Federal Reserve.

Newsom's plan states:

“Expand brackish groundwater desalination production by 28,000 acre-feet per year by 2030 and 84,000 acre-feet per year by 2040 and help guide location of seawater, desalination projects where they are cost effective and environmentally appropriate”.

4) We are not in this drought because of man made climate change. We have arrived at this point because of deliberate intention of those that have been in government for the last 60 plus years. We are humans created in the image of God, with the creative powers to develop our state, country, world and universe.

Newsom also states in his \$8 billion plan:

“The best science tells us that we need to act now to secure California’s water future. Climate change means drought...”

“Regardless of drought or flood, in this changed climate there will be less water available for people to use, To match the pace of climate change, California must move smarter and faster to update our water systems...”

5) Newsom's plan claims:

“The State will help streamline and expedite permitting to provide better clarity and certainty to further desalination projects. To this end, by June 30, 2023, the State water Board, Coastal Commission, DWR and other State entities (e.g. State Lands Commission) will develop criteria for siting of desalination facilities along the coast and recommend new standards to facilitate approval.”

This is the same Coastal Commission that would not implement the existing plan for the Poseidon Huntington Beach desalination plant on May 12, 2022.

Newsom and his buddies have NO INTENTION of implementing any workable solutions. We cannot wait till June 30, 2023 or beyond. We need to get the shovels in the ground now, build the 30 desalination plants and nuclear power related facilities.

6) Where is Mia Bonta and her croonies? All I hear from them is more of the genocidal Green Agenda. This is why you need to organize with my solutions and campaign for State Assembly 18.

Join me in getting out my solutions and the vote.
